26	Median Earnings	For all exiters in a core program, report the wage that is at the midpoint (of all the wages) between the highest and lowest wage earned in the second quarter after exit.	The value of 2ND quarter after exit wage that is the mid-point between the value of the lowest wage reported and the value of the highest wage reported for the UNIQUE RECORDS where (Funding Stream) **and** (DATE OF PROGRAM ENTRY is not null) **and** the DATE OF EXIT is within the reporting Period and (EXCLUSIONARY REASONS is null **or** EXCLUSIONARY REASONS = 00 **or** EXCLUSIONARY REASONS = 98) To determine the midpoint, the 2ND quarter after exit wages should be sorted from lowest to highest. If an odd number of unique records have been reported, the mid-point value is defined as (n+1)/2 where n is the total unique records with 2ND quarter after exit wages. Thus if 99 wage records are in the 2ND quarter after exit, the midpoint is the 50th record [(99+1)/2=50]. If an even number of unique records has been reported, then the mid-point is the arithmetic mean of the two midmost wage

			values. Thus if 100 wage records are in the 2ND quarter after exit, the mid-point is (100+1)/2 = 50.5 and the mean of the two midmost values is defined as the value of the sum of the 50th and 51st record divided by 2.
